

## Volume Control Capabilities

FCC ID: A3LSMA366U

Conversational gain with hearing aids: 13 dB

Conversational gain without hearing aids: 16 dB

**Note:** Conversational gain is the acoustic output level of speech from this handset relative to the acoustic level present in a face-to-face conversation between two people 1 meter apart. This phone is hearing-aid compatible and has been volume control tested pursuant to FCC waiver DA 23-914.

Codec and air interface combinations that have passed frequency response, and distortion/noise tests.

| Codec                                 | Air Interface       |
|---------------------------------------|---------------------|
| EVS-NB 24.4 kbps,<br>EVS-WB 24.4 kbps | VoLTE, VoNR, VoWiFi |

Codec and air interface combinations that have passed conversational gain tests.

| Codec                                                                                            | Air Interface       |
|--------------------------------------------------------------------------------------------------|---------------------|
| FR V1, FR V2, HR V1                                                                              | GSM                 |
| AMR-NB 4.75~12.2 kbps,<br>AMR-WB 6.6~23.85 kbps                                                  | WCDMA               |
| AMR-NB 4.75~12.2 kbps,<br>AMR-WB 6.6~23.85 kbps,<br>EVS-NB 5.9~24.4 kbps,<br>EVS-WB 5.9~128 kbps | VoLTE, VoNR, VoWiFi |

Codec and air interface combinations that have not been tested.

| Codec                           | Air Interface       |
|---------------------------------|---------------------|
| EVS-SWB 9.6~128 kbps            | VoLTE, VoNR, VoWiFi |
| OPUS 6~75 kbps<br>(Google Meet) | All air interface   |
