Cooktop high: This reflects how quickly the most powerful element could raise a 6-liter (6 1/3 quart) pot of water from room temperature to a near boil.

Cooktop low: This reflects how well the lowest-powered element or burner kept a low temperature as for melting chocolate. We also set the most powerful element to its lowest setting to test its ability to hold a large pot of tomato sauce below a boil.

Baking: This reflects the evenness of cookies and cakes in multi-rack baking tests.

Broiling: This denotes upper-element evenness as well as high-temperature searing, using a broiler pan full of hamburgers.

Oven capacity: This is our evaluation of usable space, including shelf area and vertical space for casseroles. For dual oven models, the score includes both ovens.

Self-cleaning: A gauge of the oven self-cleaning cycle's effectiveness at removing a baked-on mixture of eggs, lard, cherry-pie filling, cheese, tomato puree, and tapioca.
