

Predicted Reliability & Owner Satisfaction

Results in the following chart are gathered from Consumer Reports' 2019, 2020, and 2021 Spring Surveys of 31,616 gas ranges, owned by members who purchased a new unit between 2011 and 2021.

Our predicted brand reliability ratings are based on a statistical model that estimates problem rates within the first 5 years of ownership, for gas ranges that are not covered by an extended warranty or service contract. We also adjust for the number of days of use per week. The median in our survey was 6 days per week. Higher ratings are indicative of better reliability. Brands receiving a red or orange rating cannot be recommended by CR at this time.

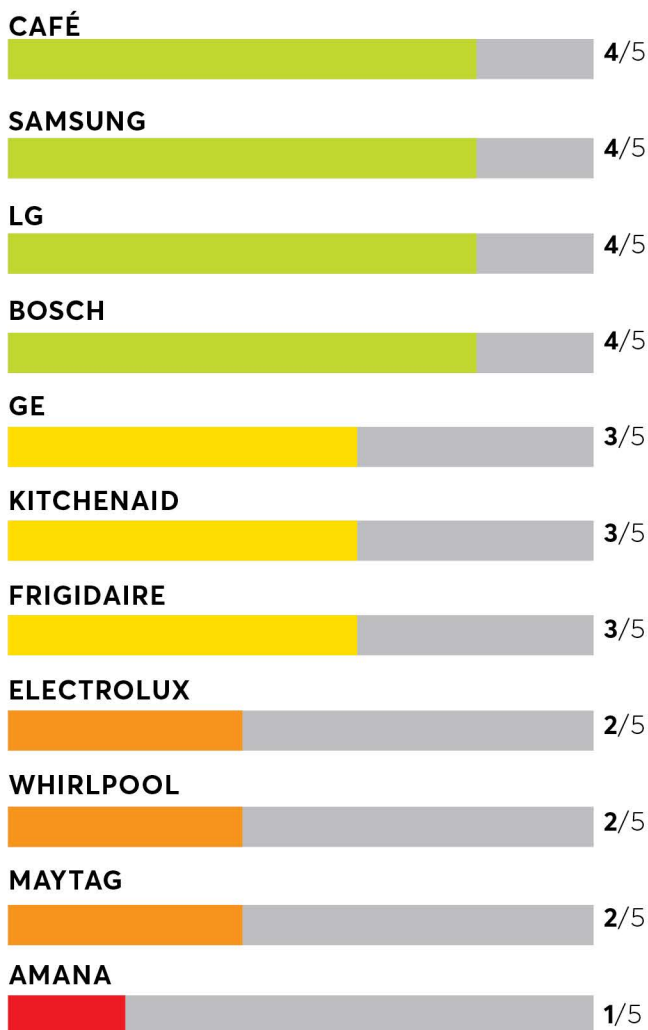

Our owner satisfaction ratings are based on the proportion of members who are extremely likely to recommend their gas range brand to friends and family.
