Expanding access to funding you need.

Federal and state grants are part of the budget picture for nearly every public sector agency in the country, but many agencies are understaffed for grants development, or lack experience with grant programs that could dramatically increase their capacity to leverage technology, to advance their missions and impact their communities. The Samsung Grants Support Program provides hospitals, clinics and other health care organizations with grants information, customized funded research, and consultation to help develop project ideas, get technologyrich projects funded, and even expand initiatives projects already in the works.

Top Grant Recipients

- Not-for-profit and public hospitals
- Not-for-profit and public clinics
- Academic Medical Centers
- Federally Qualified Health Centers
- Critical Access Hospitals and Rural Health Clinics

empowering communities

Project consultation

Grants tend to fund projects that address a clearly identified need, either for a specific population or a defined geographic community. In addition, fundable projects should have measurable objectives and a compelling reason for including technology to achieve these objectives.

Grants Development Consultants, together, with the Samsung Grants Support Program work with public sector agencies, schools, colleges, and healthcare institutions, to help them develop and define their projects in the context of what funders support.

If you already have an idea of the technology you'd like, Grants Development Consultants will help you clarify and articulate the needs the technologies will address, and provide input on other elements to further develop and strengthen your project.

Funder research

More than 5,000 grant programs are opened each year in the US, providing approximately $500 billion dollars in funding. Of course, not all of these programs are technology-friendly, and most of them have very specific parameters which define who may receive funding and what it can be used for.

With a few specifics on your concept, Samsung Grants Support Program consultants will develop customized reports on funding opportunities that best fit your project.
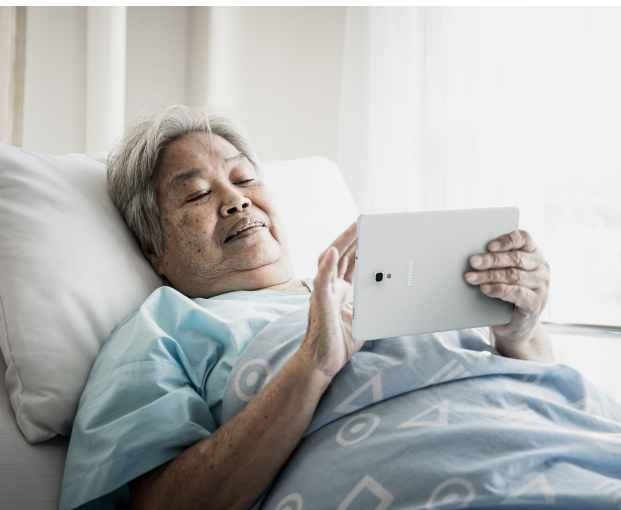

The reports will identify the most relevant funders, based on your project type, your organization type (or types, in the case of a consortium project), and the geographic location where the project will be deployed. Next, the consultants will review their findings with you on a conference call, at your convenience.

Grants development support

In order to obtain funding for your technology projects, you will ultimately need to develop and submit competitive grant applications to a qualified list of funding prospects. Whatever capacity and resources customers have to dedicate to developing grant proposals, the Samsung Grants Support Program will help you through the entire process.

A range of proposal support services are available, from review and consultation with your organization's grantwriter, to full proposal development.

Grants Development Consultants will work with you to evaluate your needs and determine the level of support which best maximizes the funding you can obtain and optimizes the technology you are able to purchase with the grant funds.

GRANTS OFFICE

Powered by Grants Office

To further grow, the Samsung Grants Support Program, Samsung has engaged Grants Office, a national grants development services firm with a 20-year track record of helping public sector agencies find and secure funding for technology projects.
